

Superannuation crystallisation calculator

The Superannuation crystallisation calculator is now available.

Last updated 5 July 2016

The crystallisation calculator helps superannuation funds calculate the crystallised segment of the tax free component of a member's superannuation interest, including any pre-July 1983 component.

The fund can also use the calculator to work out:

- the pre-1 July 1983 and post 30 June 1983 days of a member's eligible service period
- their crystallised pre-1 July 1983 amount
- their total crystallised segment amount.

You can't use the calculator if:

- the member's superannuation interest is from an untaxed source
- the member's superannuation interest supports an income stream that commenced to be paid before 1 July 2007.

You will need:

- the start date of the member's eligible service period
- the following amounts as at 30 June 2007 for your member
 - superannuation interest amount
 - concessional component amount
 - post-June 1994 invalidity component amount

- CGT exempt component amount
- undeducted contributions amount.

Next step

Superannuation crystallisation calculator – the calculator will take 2 to 5 minutes to complete.

For more information, see [Calculating components of a super benefit](#).
