Motor vehicle registries data-matching program

Find out about the purpose and objectives of this program.

Last updated 18 July 2023

Program objectives

Our data-matching programs help us fulfil our responsibility to protect public revenue and maintain community confidence in the integrity of the tax and superannuation systems.

The objectives of the motor vehicle registries data-matching program are to:

- help ensure that individuals and businesses are fulfilling their tax and superannuation reporting obligations

- identify and educate those individuals and businesses who may be failing to meet their registration or lodgment obligations (or both) and assist them to comply
- obtain intelligence about taxpayers that buy and sell motor vehicles to identify risks and trends of non-compliance with tax and superannuation obligations
- identify and address taxpayers buying and selling motor vehicles who may not be meeting their obligations to register and lodge returns (including activity statements) and ensure the correct reporting of income and entitlement to both deductions and input tax credits
- use the motor vehicle purchaser's data as an indicator of risk, along with other data holdings, to identify taxpayers that have purchased vehicles with values that are not commensurate with the income they have reported
- identify cases for investigation of taxpayers of interest, such as sellers, licenced dealers, fleet managers, leasing companies or representatives of these taxpayers to determine if the use of interposed proxy ownership is used to conceal the real accumulation of wealth, therefore representing a material threat to public revenue
- identify and deal with those taxpayers who may not have met their obligations primarily with regards to GST, fringe benefits tax, luxury car tax, fuel schemes and income tax
- promote voluntary compliance and strengthen community confidence in the integrity of the tax and superannuation systems by publicising the running of this data matching program.

Why we look at this data

Our motor vehicle registries data-matching program has been operating for 19 years in various iterations.

The motor vehicle registries data matching program has been developed to assess the overall tax compliance of individuals and businesses involved in buying and selling motor vehicles. We will match the data provided by state and territory motor vehicle registry authorities against ATO taxpayer records with the intent of identifying

those who are not participating in the tax and superannuation system by meeting their registration, reporting, lodgment and payment obligations.

Information will be acquired from state and territory motor vehicle registry authorities where their records indicate that both:

- a vehicle has been transferred or newly registered during the 2022–23, 2023–24 and 2024–25 financial years
- the purchase price or market value is equal to or greater than \$10,000. This threshold was determined by review of vehicle prices trends and cost/benefit assessment.

The motor vehicle registries data-matching program will allow us to identify and address several tax risks, including:

- GST, fringe benefit tax, luxury car tax, fuel schemes and income tax compliance activities
- identifying higher risk taxpayers with outstanding lodgments and undeclared income whose asset holdings may not be proportionate to their declared financial position
- providing a holistic view of a taxpayer's financial position
- supporting our compliance areas with modelling and case identification
- supporting taskforce programs including the shadow economy.

Note: The term 'black economy' has now changed to **shadow economy**. This change reflects the Organisation for Economic Co-operation and Development's (OECD) definition of unreported or dishonest economic activity.

QC 64549

Motor vehicle registries data

About motor vehicle registries data and what we do with the data we collect under the program.

Last updated 18 July 2023

Motor vehicle registries data overview

We compare the motor vehicle registries data obtained from the state and territory motor vehicle registry authorities with our internal data holdings to identify relevant cases for administrative action.

Details will be requested from the state and territory motor vehicle registering authorities where their records indicate a vehicle has been transferred or newly registered during the identified financial years and the purchase price or market value is equal to or greater than \$10,000. This threshold is consistent with earlier programs and was determined by review of vehicle price trends and cost/benefit assessment.

We will determine a tax compliance risk profile of taxpayers buying, selling or acquiring motor vehicles and provide us with information to:

- deliver products and tailored education strategies to support taxpayers in managing their tax obligations, and
- identify taxpayers at risk of not complying with their tax or superannuation obligations for referral to relevant areas for appropriate treatment.

In cases where taxpayers fail to comply with these obligations even after being prompted and reminded of them, escalation for prosecution action may be initiated in some circumstances.

Where a taxpayer is correctly meeting their obligations, the use of the data will reduce the likelihood of contact from us.

Previous related programs

The continued collection of motor vehicle registries data will be used to support ongoing compliance checks for luxury car tax, fringe benefits tax and fuel schemes, as well as identifying higher risk taxpayers with outstanding lodgments and those with undeclared income.

The data is used in conjunction with other data sources in our risk detection models and profiling tools to generate compliance actions for tax officer review.

Data providers

We are the matching agency and, in most cases the sole user of the data obtained during this data-matching program.

Data will be obtained from the following 8 state and territory motor vehicle registry authorities:

- Australian Capital Territory – Access Canberra
- New South Wales – Transport for NSW
- Northern Territory – Department of Infrastructure, Planning and Logistics
- Queensland – Department of Transport and Main Roads
- South Australia – Department for Infrastructure and Transport
- Tasmania – Department of State Growth, Vehicle Registration and Licencing Branch
- Victoria – Department of Transport and Planning
- Western Australia – Department of Transport

To ensure statutory requirements are met, we obtain data under our formal information gathering powers. These are contained in section 353-10 of Schedule 1 to the *Taxation Administration Act 1953*.

This is a coercive power, and data providers are obligated to provide the information requested.

We will use the data for tax and superannuation compliance purposes.

Privacy Act

Data will only be used within the limits prescribed by Australian Privacy Principle 6 (APP6) contained in Schedule 1 of the Privacy Act and in particular:

- APP6.2(b) – the use of the information is required or authorised by an Australian law
- APP6.2(e) – the ATO reasonably believes that the use of the information is reasonably necessary for our enforcement-related activities.

Data elements we collect

We will collect data from the state and territory motor vehicle registry authorities for the 2022–23, 2023–24 and 2024–25 financial years.

We negotiate with the selected data providers individually to obtain data held in their systems. The data collected may contain all or a selection of the fields listed below.

Client details

Identification details of the purchasers, sellers, licenced dealer, fleet manager, leasing company (or representative of any of these) and the registering person for an unincorporated body include:

- Name – individual
- Name – business (legal and trading)
- Address (including postcode) – residential, business (for legal notices), postal (for renewals)
- Date of birth – (individuals)
- Contact phone number
- Australian business number (if applicable)
- Australian company number (if applicable)

Based on experience from previous motor vehicle registries data-matching programs, the majority of transactions involve only a single seller and single buyer.

Transaction details

Transaction details include:

- Date of transaction
- Type of transaction (e.g. new registration, transfer)
- Sale price of the vehicle
- Market value of the vehicle
- Vehicle's garage address
- Type of intended vehicle use (e.g. private, business)
- Vehicle make
- Vehicle model

- Vehicle body type
- Year of manufacture
- Engine capacity or number of cylinders
- Tare weight (unladen weight)
- Gross weight (gross vehicle mass and/or gross combination mass)
- Vehicle identification number (chassis number)
- Registration number
- Transaction receipt number
- State stamp duty exemption (yes or no)
- Reason for stamp duty exemption
- Dealer's licence number

Number of records

We expect to collect data on approximately 1.5 million individuals each financial year for this program.

Data quality

We anticipate that the data quality will be of a high standard based on our prior motor vehicle data-matching programs.

Data is transformed into a standardised format and validated to ensure that it contains the required data elements prior to loading to our computer systems. We undertake program evaluations to measure effectiveness before determining whether to continue to collect future years of data or to discontinue the program.

Data retention

We collect data under this program for all financial years from 2016–17 to 2024–25. We collect this data annually following the end of each financial year.

Due to the number of data providers, we collect data periodically. We work with the data providers and aim to balance our requests against

peaks and troughs of demand in a data provider's own business.

We destroy data that is no longer required in accordance with the *Archives Act 1983*, and the records authorities issued by the National Archives of Australia, for both general and ATO-specific data.

The collection of 2016–17 to 2018–19 financial years was conducted between May 2018 and January 2020. The ATO was granted exemption by the Privacy Commissioner in 2018 to retain the 2016–17 to 2018–19 data for 3 years. The exemption request was required to satisfy the National Archives of Australia's General Disposal Authority 24 (GDA24) – *Records relating to data matching exercises*. GDA24 has been revoked; as such further exemption requests were not required.

We retain each financial year's data for 5 years from receipt of the final instalment of verified data files from the data providers. The data is required for this period for the protection of public revenue as:

- The discrepancy matching that occurs under parts of this program is iterative in nature. For example, one discrepancy match may be used in subsequent and different matching processes. This process can typically occur over multiple financial years.
- The data enhances our ability to identify taxpayers who may not be complying with their tax and super obligations, which is integral to protecting the integrity of the tax and superannuation systems.
- Retaining data for 5 years supports our general compliance approach of reviewing an assessment within the standard period of review and aligns with the requirements for taxpayers to keep their records.
- The data is also used in multiple risk models, including models that establish retrospective profiles over multiple years aligned with period of review.
- Retaining the data for 5 years will support our ability to conduct longer term analysis of the risks associated with asset accumulation.

While increased data retention periods may increase the risk to privacy, we have a range of safeguards to manage and minimise this. Our systems and controls are designed to ensure the privacy and security of the data we manage.

QC 64549

Notifying the public of the data-matching the program

Find out how we notify the public about this program.

Last updated 18 July 2023

We notify the public of our intention to collect 2022–23 to 2024–25 data by:

- publishing a notice in the [Federal Register of Legislation](#)  gazette in the week starting 17 July 2023.
- publishing this data-matching program protocol on our website at ato.gov.au/dmprotocols
- advising the data providers that they
 - can notify their clients of their participation in this program
 - should update their privacy policies to note that personal information is disclosed to the ATO for data-matching purposes.

For more information, visit:

- Australian Capital Territory – [Access Canberra Privacy Policy](#) 
- New South Wales – [Transport for NSW Privacy Statement](#) 
- Northern Territory – [NT Information Act Privacy Scheme](#) 
- Queensland – [Department of Transport and Main Roads Privacy Statement](#) 
- South Australia – [Privacy Principles \(PDF, 165KB\)](#) 
- Tasmania – [Department of State Growth Personal Information Protection](#) 
- Victoria – [Department of Transport and Planning Privacy Policy](#) 
- Western Australia – [Driver and Vehicle Services Privacy Policy \(PDF, 468KB\)](#) 

Gazette notice content

The following information about the data-matching program appears as a gazette notice in the Federal Register of Legislation.

Gazette notice: Commissioner of Taxation – Notice of a motor vehicle registries data-matching program 18 July 2023

The Australian Taxation Office (ATO) will acquire motor vehicle registry data from state and territory motor vehicle registry authorities for 2022–23 through to 2024–25.

The data items include:

- identification details (names; addresses; phone numbers; date of birth for individuals; Australian business number; Australian company number for purchasers, sellers, licenced dealer, fleet manager, leasing company (or representative of any of these) and the registering person for an unincorporated body).
- transaction details (date of transaction; type of transaction; sale price of the vehicle; market value of the vehicle; vehicle's garage address; type of intended vehicle use; vehicle make; vehicle model; vehicle body type; year of manufacture; engine capacity or number of cylinders; tare weight; gross weight; vehicle identification number; registration number; transaction receipt number; state stamp duty exemption; reason for stamp duty exemption; dealer's licence number).

We estimate that records relating to approximately 1.5 million individuals will be obtained each financial year.

The data will be acquired and matched to our internal data holdings to identify relevant cases for administrative action, determine a tax compliance risk profile of taxpayers buying, selling or acquiring motor vehicles and provide us with information to:

- deliver products and tailored education strategies to support taxpayers in managing their tax obligations, and
- identify taxpayers at risk of not complying with their tax or superannuation obligations for referral to relevant areas for appropriate treatment.

The objectives of this program are to:

- help ensure that individuals and businesses are fulfilling their tax and superannuation reporting obligations
- identify and educate those individuals and businesses who may be failing to meet their registration or lodgment obligations (or both) and assist them to comply
- obtain intelligence about taxpayers that buy and sell motor vehicles to identify risks and trends of non-compliance with tax and superannuation obligations
- identify and address taxpayers buying and selling motor vehicles who may not be meeting their obligations to register and lodge returns (including activity statements) and ensure the correct reporting of income and entitlement to both deductions and input tax credits
- use the motor vehicle purchaser's data as an indicator of risk, along with other data holdings, to identify taxpayers that have purchased vehicles with values that are not commensurate with the income they have reported
- identify cases for investigation of taxpayers of interest, such as sellers, licenced dealers, fleet managers, leasing companies or representatives of these taxpayers to determine if the use of interposed proxy ownership is used to conceal the real accumulation of wealth, therefore representing a material threat to public revenue
- identify and deal with those taxpayers who may not have met their obligations primarily with regards to GST, fringe benefits tax, luxury car tax, fuel schemes and income tax
- promote voluntary compliance and strengthen community confidence in the integrity of the tax and superannuation systems by publicising the running of this data matching program.

A document describing this program is available at ato.gov.au/dmprotocols.

This program follows the Office of the Australian Information Commissioner's *Guidelines on data matching in Australian Government administration* (2014) (the guidelines). The

guidelines include standards for the use of data-matching as an administrative tool in a way that:

- complies with the Australian Privacy Principles (APPs) and the *Privacy Act 1988* (Privacy Act)
- Is consistent with good privacy practice.

A full copy of the ATO's privacy policy can be accessed at ato.gov.au/privacy.

QC 64549

Our lawful role

Find out what our legislated functions are.

Last updated 18 July 2023

Our powers of administration

The ATO is the Australian Government's principal revenue collection agency. The Commissioner of Taxation has responsibility for ensuring taxpayers meet their tax and superannuation obligations.

We follow the Office of the Australian Information Commissioner's (OAIC) Guidelines on data matching in Australian Government administration (2014) in our data-matching activities.

Our data-matching programs help to ensure that Australians are fulfilling their tax and superannuation obligations.

This information forms part of all data-matching program protocols.

We take our obligations seriously. Failure to address non-compliant behaviour has the potential to undermine community confidence in the integrity of the tax and superannuation systems and our capability to administer those systems.

We carry out our legislated functions through general powers of administration contained in but not limited to:

- section 3A of the *Taxation Administration Act 1953*

- section 8 of the Income Tax Assessment Act 1936
- section 1-7 of the Income Tax Assessment Act 1997
- section 43 of the Superannuation Guarantee (administration) Act 1992
- section 356-5 in Schedule 1 of the *Taxation Administration Act 1953*.

Data-matching is one of the strategies used to identify and deal with non-compliant behaviour. It helps provide assurance that taxpayers are meeting their obligations.

Data-matching guidelines we follow

Our data-matching programs follow the OAIC [Guidelines on data matching in Australian Government administration](#)  (2014).

These guidelines help us and other government agencies use data matching as an administrative tool in a way that:

- complies with the [Australian Privacy Principles](#)  (APPs)
- complies with the [Privacy Act 1988](#)  (Privacy Act)
- is consistent with good privacy practice.

The Privacy Act

The [Privacy Act 1988](#)  (Privacy Act) regulates how personal information is handled by certain entities, such as companies and government agencies.

Schedule 1 of the Privacy Act lists the 13 Australian Privacy Principles (APPs). The principles cover the collection, use, disclosure, storage and management of personal information.

Data will only be used within the limits prescribed by the APPs and the Privacy Act.

The [Australian Government Agencies Privacy Code](#) , embeds privacy in all government agency processes and procedures. It ensures that privacy compliance is a priority in the design of our systems, practices and culture.

We comply with the code's requirements, and we are transparent and open about what information we collect, hold and disclose. We train our staff to keep personal information safe, and all our systems and offices are protected and secure.

Our data stewardship model upholds our data governance practices and embeds 6 ethical standards that guide how we collect, manage, share and use your data:

1. Act in the public interest, be mindful of the individual.
2. Uphold privacy, security and legality.
3. Explain clearly and be transparent.
4. Engage in purposeful data activities.
5. Exercise human supervision.
6. Maintain data stewardship.

Find out more about how we protect your privacy.

How we protect your personal information

Our staff are subject to the strict confidentiality and disclosure provisions contained in Division 355 of Schedule 1 to the *Taxation Administration Act 1953*. Penalties include terms of imprisonment in cases of serious contravention of these provisions.

Keeping data safe

Data-matching programs are conducted on our secure systems that comply with the requirements of:

- the [Australian Government Information Security Manual](#)  produced by the Australian Cyber Security Centre, which governs the security of government information and communication technology (ICT) systems
- the [Australian Government Protective Security Policy Framework](#) , which provides guidance on security governance, personnel security, physical security and information security.

All ATO computer systems are strictly controlled according to Australian Government security standards for government ICT systems, with features including:

- system access controls and security groupings
- login identification codes and password protection
- full audit trails of data files and system accesses.

For more information see [Online security](#).

Data retention and destruction

All information and records are managed in accordance with the provisions of the [Archives Act 1983](#) .

The requirement to retain data is reviewed on an ongoing basis in accordance with the timeframes and requirements of the OAIC guidelines. We destroy data that is no longer required, in accordance with the *Archives Act 1983* and the records authorities issued by the National Archives of Australia, both general and ATO-specific.

Under section 24 of the Act, records can be disposed of where it is approved by the National Archives; required by another law, or a normal administrative practice that the Archives approves of.

Approval from National Archives is normally provided through records authorities, which are used in the process of sentencing to make decisions about keeping, destroying or transferring particular information and records.

General or ATO-specific records authorities issued by National Archives apply to our processes of verifying and assuring taxpayer compliance with tax, superannuation and other laws administered by the ATO.

Our record management practices allow us to satisfy the OAIC guidelines and Australian Privacy Principle 11 (APP 11) contained in Schedule 1 of the *Privacy Act 1988* and in particular:

- APP11.1 – An APP entity must take reasonable steps to protect information from
 - misuse, interference and loss
 - unauthorised access, modification or disclosure
- APP11.2 – APP entity must take reasonable steps to destroy or de-identify information it no longer needs.

Our on-disclosure provisions

In very limited and specific circumstances, we may be permitted by law to disclose individual records to other government agencies.

Division 355 of Schedule 1 to the *Taxation Administration Act 1953* sets out the government agencies we can disclose taxpayer information to, and the circumstances in which we are permitted to make those disclosures.

These include agencies responsible for:

- state and territory revenue laws
- payments of social welfare and health and safety programs for determining eligibility for certain types of benefits and rebates
- overseeing super funds, corporations and financial market operators to ensure compliance with prudential regulations
- determining entitlement to rehabilitation and compensation payments
- law enforcement activities to assist with specific types of investigations
- domestic and international partners under tax disclosure and tax treaty arrangements
- policy analysis, costing and effectiveness measurement

Each request for information by other agencies will be assessed on its merits and must be for an admissible purpose allowed for by tax laws. In specific permissible circumstances, on-disclosures may include de-identified datasets for statistical analysis.

QC 64549

Why we undertake data matching

Learn why we have data-matching protocols and the costs and benefits of data matching.

Last updated 18 July 2023

Meeting our accountability

To effectively administer the tax and superannuation systems, we are required in accordance with the law to collect and analyse information concerning the financial affairs of taxpayers and other participants in the Australian economy.

In addition to our administrator responsibilities, the *Public Service Act 1999* (PS Act) requires each agency head to ensure their agency complies with legislative and whole-of-government requirements.

Agency heads are required to ensure proper use and management of public resources as per the *Public Governance, Performance and Accountability Act 2013* (PGPA Act).

We consider and undertake a range of alternatives to data-matching to ensure entities are complying with their tax and superannuation obligations. Relying only on data that we already hold is of limited value for the following reasons:

- The tax system operates on willing participation, so our data is derived from taxpayers that are correctly registered and meeting their lodgment obligations.
- The only other way of ensuring that taxpayers are reporting their obligations correctly would be to contact every taxpayer individually directly.

Uses of data matching

Data matching allows us to cross-reference suitable external data to identify taxpayers who may not be in full compliance with their obligations, as well as those that may be operating outside the tax and superannuation systems. It also reduces the likelihood of unnecessarily contacting taxpayers who are complying with their tax obligations.

Data matching is an effective method of examining the records of thousands of taxpayers. We do this to ensure compliance with lodgment and reporting obligations that would otherwise be a resource-intensive exercise.

Data matching also assists us to effectively promote voluntary compliance by notifying the public of risk areas and activities under scrutiny.

Costs and benefits analysis

The [costs](#) of our data-matching activities are more than offset by the [benefits](#).

Benefits

The use of data is increasingly common across government agencies and the private sector. Data, data usage, computer power and storage continue to grow, which increases the benefits from data matching.

Data matching and the insights it provides help us:

- deliver tailored products and services, which underpins our culture of service
- make it easier for taxpayers and agents by providing tailored messages in our online services
- enable early intervention activities, as our goal is prevention rather than correction
- maintain community confidence in our ability to administer the tax and superannuation systems, because we can
 - make better, faster and holistically smarter decisions with measurable results to deliver a level playing field for all
 - solve problems and shape what we do for the community
 - advise government and deliver outcomes with agility
- maintain the integrity of the tax and superannuation systems by
 - providing education to assist taxpayers to do the right thing
 - deterring behaviours so taxpayers adhere to their obligations
 - detecting taxpayers who are not complying with their obligations, targeting those that continue to deliberately abuse the tax and superannuation systems
 - enabling enforcement activity and recovery of tax revenue
 - directing compliance activities to assure that wider risks to revenue do not exist.

Costs

There are some incidental costs to us in the conduct of data-matching programs, but these are more than offset by the total revenue protected. These costs include:

- data analyst resources to identify potential instances of non-compliance
- compliance resources to manage casework and educational activities
- governance resources to ensure compliance with the guidelines and Privacy Act
- quality assurance processes to ensure the rigour of the work undertaken by analysts and compliance staff
- storage of the data.

QC 64549

How we undertake data matching

Find out about the systems and processes we use in data-matching activities.

Last updated 18 July 2023

Data-matching process

Our data-matching process uses both mainframe-based and mid-range applications that comply with an ATO-designed software solution (technical standard). The technical standard supports all our data-matching programs and aligns with [OAIC guideline 4.7](#) .

We use over 60 sophisticated identity-matching techniques to ensure we identify the correct taxpayer when we obtain data from third parties. These techniques use multiple identifiers to obtain an identity match. The identity-matching process appends matching information to the original reported transaction to include an ATO identifier number and a 3-character outcome code that indicates to the user the level of

matching confidence for the transaction. For example, where a name, address and date of birth are available, all items are used in the identity-matching process. Very high confidence matches will occur where all fields are matched.

Additional manual processes may be undertaken where high confidence identity matches do not occur, or a decision taken to destroy data no longer required. Our manual identity-matching process involves an ATO officer reviewing and comparing third-party data identity elements against ATO information on a one-on-one basis, seeking enough common indicators to allow confirmation (or not) of an individual's identity. We commonly call this process manual uplifting.

Data analysts use various models and techniques to detect potential discrepancies, such as under-reported income or over-reported deductions. Higher risk discrepancy matches will be loaded to our case management system and allocated to compliance staff for actioning. Lower risk discrepancy matches will be further analysed, and a decision made to take some form of compliance or educational activity, or to destroy the data.

To maintain integrity of the administration of the tax and superannuation systems, only staff with a direct and genuine 'need to know' can access the technical standards for our identity and discrepancy-matching solutions.

Where administrative action is proposed, additional checks will take place to ensure the correct taxpayer has been identified. The taxpayers will be provided with the opportunity to verify the accuracy of the information before any administrative action is taken.

How we amend a return

We may use data to provide tailored messages for individual taxpayers in our online services. This will prompt taxpayers to check they are correctly meeting their reporting obligations.

In limited circumstances where we identify inadvertent mistakes, we may amend a tax return with the correct data that is available to us.

If you disagree with the decision we made about your information, you can **request a review by lodging an objection**.

After a return is lodged, where we identify a discrepancy that requires verification, we will contact the taxpayer usually by phone, letter or

email. Taxpayers will have up to 28 days to verify the accuracy of the information and respond before we take administrative action.

For example, where discrepancy matching identifies that a taxpayer may not be reporting all their income, but it appears they're reporting the income in another taxpayer's return, they will be given the opportunity to clarify the situation.

The data may also be used to ensure taxpayers are complying with their other tax and superannuation obligations, including registration requirements, lodgment obligations and payment responsibilities.

In cases where taxpayers fail to comply with these obligations, after being reminded of them, we may instigate prosecution action in appropriate circumstances.

Where a taxpayer has correctly met their obligations, the use of the data will reduce the likelihood of contact from us.

In limited circumstances we may use data from a data-matching program to correct mistakes without notifying individuals in advance. When we do so, we will seek an exemption from the Australian Information Commissioner.

Making a privacy complaint

Our privacy policy outlines how we collect, hold and disclose data, and explains what you can do if you're not satisfied with the way your information has been treated.

If you're not satisfied with how we have collected, held, used or disclosed your personal information, you can **make a formal complaint**.

If you're not satisfied with the outcome of the privacy complaint, you can contact the [Office of the Australian Information Commissioner](#) .

QC 64549

Data quality

Learn about our quality assurance processes and how we assure data is fit for use.

Last updated 18 July 2023

Quality assurance processes

Quality assurance is integrated into our processes and computer systems and applied throughout the data-matching cycle.

These assurance processes include:

- registering the intention to undertake a data-matching program on an internal register
- risk assessment and approval from the data steward and relevant senior executive service (SES) officers prior to any data-matching program being undertaken
- conducting program pilots or obtaining sample data to ensure the data-matching program will achieve its objectives prior to full datasets being obtained
- notifying the OAIC of our intention to undertake the data-matching program and seek permission to vary from the data-matching guidelines (where applicable)
- restricting access to the data to approved users and access management logs record details of who has accessed the data
- quality assurance processes embedded into compliance activities, including
 - review of risk assessments, taxpayer profiles and case plans by senior officers prior to client contact
 - ongoing reviews of cases by subject matter technical experts at key points during the life cycle of a case
 - regular independent panel reviews of samples of case work to ensure our case work is accurate and consistent.

These processes ensure data is collected and used in accordance with our data-management policies and principles and complies with the OAIC's [Guidelines on data matching in Australian Government administration](#) .

How we ensure data quality

The data is sourced from providers' systems and may not be available in a format that can be readily processed by our systems. We apply extra levels of scrutiny and analytics to verify the quality of the data.

This includes but is not limited to:

- meeting with data providers to understand their data holdings, including their data use, data currency, formats, compatibility and natural systems
- sampling data to ensure it is fit for purpose before fully engaging providers on task
- verification practices at receipt of data to check against confirming documentation; we then use algorithms and other analytical methods to refine the data.

Data is transformed into a standardised format and validated to ensure that it contains the required data elements prior to loading to our computer systems. We undertake program evaluations to measure effectiveness before determining whether to continue to collect future years of the data or to discontinue the program.

The ATO's enterprise data quality (DQ) approach champions 6 core DQ dimensions:

- Accuracy – the degree to which the data correctly represents the actual value.
- Completeness – if all expected data in a data set is present.
- Consistency – whether data values in a data set are consistent with values elsewhere within the data set or in another data set.
- Validity – data values are presented in the correct format and fall within a predefined set of values.
- Uniqueness – if duplicated files or records are in the data set.
- Timeliness – how quickly the data is available for use from the time of collection.

To assure data is fit for consumption and maintains integrity throughout the data-matching program, the following DQ elements are also applied:

- Currency – how recent the time period is that the data set covers.

- Precision – the level of detail of a data element.
- Privacy – access control and usage monitoring.
- Reasonableness – reasonable data is within the bounds of common sense or specific operational context.
- Referential integrity – when all intended references within a data set or with other data sets are valid.

QC 64549

Our commitment to you

We are committed to providing you with accurate, consistent and clear information to help you understand your rights and entitlements and meet your obligations.

If you follow our information and it turns out to be incorrect, or it is misleading and you make a mistake as a result, we will take that into account when determining what action, if any, we should take.

Some of the information on this website applies to a specific financial year. This is clearly marked. Make sure you have the information for the right year before making decisions based on that information.

If you feel that our information does not fully cover your circumstances, or you are unsure how it applies to you, contact us or seek professional advice.
